# North Carolina County Data Profile:

# **Person County**

Presented by:

#### Community & Clinical CONNECTIONS for Prevention & Health Branch NORTH CAROLINA Branch DIVISION OF PUBLIC HEALTH

Prepared by:

#### **UNCHealthySolutions**

enhancing public health capacity and strategy

unchealthysolutions.web.unc.edu

Version: 2024-0209

This county data profile was created to ensure local partners in Person County have information that can be helpful for program planning or when participating in planning activities conducted by other organizations.

The information in this data profile is grouped into several topics:

- A) Demographics..... p. 3
- B) Health Status.....p. 5
- C) Determinants of Health..... p. 6
- D) Health Behaviors.....p. 9
- E) Local Capacity for Change...... p. 10

Each topic begins with a description and suggestions for how to use the information. Indicators listed within each topic are specifically relevant to the PAN Project. Proposals can include additional data or information, especially if the data demonstrate local need or capacity for response.

Each indicator includes a definition and a source for the information. The county data are presented and compared to averages for the state of North Carolina. For most indicators, bar charts are included to provide a quick visual comparison between the county and state.

To identify indicators where the county data are notably different from the state average (i.e., more than one standard deviation from the state mean, median, or mode), we provide a letter in the margin to the left of the county bar chart (B = county is better than the state average; W = county is worse than the state average).

B Better than average

Worse than average

#### A. Demographics

Governments, private organizations, community groups, and researchers use demographics to describe a population's characteristics. Key items include the land area; the number and sizes of municipalities; the population size; distributions by age, race, and sex; income and education levels; and key businesses and industries. **HOW TO USE THIS INFORMATION:** when identifying priority populations for assessment, service-delivery, or funding, and when identifying inequities that need attention.

1. Popula	ation	
	Person County	<b>39,486</b> Number of residents.
	County average in NC	52,071 a
		Source: NC Office of State Budget and Management (OSBM) (2021)
2. <b>Area</b> (s	square miles)	
	Person County	<b>392</b> Square miles of land.
	County average in NC	460 a
		Source: NC Office of State Budget and Management (OSBM) (2020)
3. Numbe	er of <b>municipalities</b>	
	Person County	1 Number of municipalities.

#### **B. Health Status**

The health status of a population might include information about causes of death (mortality) or chronic disease or injury (morbidity), and the impact each can have on the general quality of life experienced in a community. Some indicators of health status are "indexes," which combine multiple items together. **HOW TO USE THIS INFORMATION:** when describing the health needs of a community to decision-makers or funders so they understand why intervention is needed.

#### **C. Determinants of Health**

The health of a population is an outcome or result of many things, including the natural and human-created environments in which people live, work, learn, play, and pray, from the micro environment inside a building to the macro environment of an entire city. These environments, and the way people and organizations conduct their activities in these environments, are governed by policies such as laws and regulations. Some of these environments and policies are a part of larger systems (e.g., education, transportation, health care, and the local economy), which structure the world around us and influence our choices. For that reason, environments, policies, and systems are called "determinants" of health. **HOW TO USE THIS INFORMATION:** when identifying to stakeholders and funders the underlying structural causes of health outcomes or health inequities which will need improvement in order to support healthy living.

1. County r	anking in NC by <b>health f</b> a	actors (	1 is best, 100 is worst)

**UNCHealthySolutions** enhancing public health capacity and strategy

#### **D. Health Behaviors**

A population's behaviors provide information about how people respond to their physical environment and other structural determinants in their community settings. Without health-supporting structures, it is difficult for a community to adopt healthy behaviors. **HOW TO USE THIS INFORMATION:** when describing the lifestyle of a community and providing the rationale for structural improvements.

1. Percentage of adults who are <b>physically inactive</b>			
	<b>Person County</b> County average in NC	<b>25%</b> 24% <sup>c</sup>	Percentage of adults (age 20 and older) who report no leisure-time physical activity (such as running, calisthenics, golf, gardening, or walking for exercise). Source: County Health Rankings (2023)

### E. Local Capacity for Change

A community's capacity for change is founded on the people with knowledge about a community's needs and the strengths to address them. The information they have gathered through assessments, the ideas they have explored or piloted, and their relationship networks are all capacity-enhancing items. **HOW TO USE THIS INFORMATION:** when informing decision-makers, funders, and other stakeholders about the local knowledge, skills, and talents that could contribute to intervention and health improvement efforts.
