# NC Physical Activity and Nutrition (PAN) Project Data Profile for Wayne County

Presented by:

Community & Clinical CONNECTIONS for Prevention & Health Branch NORTH CAROLINA Branch DIVISION OF PUBLIC HEALTH

Prepared by:

#### **UNC**HealthySolutions

enhancing public health capacity and strategy

unchealthy solutions. we b. unc. edu

Version: 2018-1003

This county data profile was created to ensure local partners in Wayne County have relevant information to prepare a funding proposal for the NC CCCPH Branch *Physical Activity and Nutrition (PAN) Project*, which will help develop physical activity and nutrition opportunities in the county.

#### What is the PAN Project:

The PAN Project will support a range of activities intended to develop opportunities for physical activity and healthy eating. For example, the PAN Project will:

- Bring food service guidelines into many settings to ensure that healthy options including fruits and vegetables are available in worksites, early child care, and community settings.
- Assist clinics, worksites, early child care, and community settings to provide supportive environments to mothers who choose to breastfeed their infants.
- Integrate nutrition and physical activity standards into early child care settings, helping counties ensure their youngest citizens are living in a culture of health.
- Help citizens and planners develop safe, activity-friendly routes between everyday destinations.

The information in this data profile is grouped into several topics:

- A) Demographics.....p. 3
- B) Health Status.....p. 4
- C) Determinants of Health.....p. 5
- D) Health Behaviors..... p. 7
- E) Local Capacity for Change.....p. 8

Each topic begins with a description and suggestions for how to use the information. Indicators listed within each topic are specifically relevant to the PAN Project. Proposals can include additional data or information, especially if the data demonstrate local need or capacity for response.

Each indicator includes a definition and a source for the information. The county data are presented and compared to averages for the state of North Carolina. For most indicators, bar charts are included to provide a quick visual comparison between the county and state.

To identify indicators where the county data are notably different from the state average (i.e., more than one standard deviation from the state mean, median, or mode), we provide a letter in the margin to the left of the county bar chart (B = county is better than the state average; W = county is worse than the state average).

**B** Better than average

Worse than average

#### A. Demographics

Governments, private organizations, community groups, and researchers use demographics to describe a population's characteristics. Key items include the land area; the number and sizes of municipalities; the population size; distributions by age, race, and sex; income and education levels; and key businesses and industries. **HOW TO USE THIS INFORMATION:** when describing physical and population characteristics to a funder so they understand the priority groups to receive intervention or assistance.

#### **B. Health Status**

The health status of a population might include information about causes of death (mortality) or chronic disease or injury (morbidity), and the impact each can have on the general quality of life experienced in a community. Some indicators of health status are "indexes," which combine multiple items together. **HOW TO USE THIS INFORMATION:** when starting to describe the health needs of a community to a funder so they understand why intervention is needed.

#### **C. Determinants of Health**

The health of a population is an outcome or result of many things, including the natural and human-created environments in which people live, work, learn, play, and pray, from the micro environment inside a building to the macro environment of an entire city. These environments, and the way people and organizations conduct their activities in these environments, are governed by policies such as laws and regulations. Some of these environments and policies are a part of larger systems (e.g., education, transportation, health care, and the local economy), which structure the world around us and influence our choices. For that reason, environments, policies, and systems are called "determinants" of health. **HOW TO USE THIS INFORMATION:** when identifying to a funder the underlying structural causes and influences of health which need to be improved in order to support healthy living.

1. County ranking in NC by hea	alth factors (1 is best, 100 is worst)
Wayne County County average in NC	<ul> <li># 72</li> <li># 51 a County ranking in NC (from 1 to 100) by health factors, including: social and economic factors, health behaviors, clinical care, and physical environment. ## **D. Health Behaviors**

A population's behaviors provide information about how people respond to their physical environment and other structural determinants in their community settings. Without health-supporting structures, it is difficult for a community to adopt healthy behaviors. **HOW TO USE THIS INFORMATION:** when describing the lifestyle of a community and providing the rationale for structural improvements.

1. Percent	age of adults who are <b>p</b>	ysically inactive

## E. Local Capacity for Change

A community's capacity for change is founded on the people with knowledge about a community's needs and the strengths to address them. The information they have gathered through assessments, the ideas they have explored or piloted, and their relationship networks are all capacity-enhancing items. **HOW TO USE THIS INFORMATION:** when convincing a funder of the local skills and talents that will contribute to intervention and improvement efforts.
